ABSTRACT

"Internet+" has been integrated deeply into various industries, which also inspires them innovation of the alumni management work. The aim of the project is to build an interaction between alumni and institution. Alumni can contact to the students regarding job opportunities and the students can share the institutional activities to the alumni. A system that helps to manage alumni data and provide easy access to the system. The system will automatically list all Alumni information and their status will be transferred from the student module to the alumni module. The system aims at building platform to make alumni network ,store alumni data.

Keyword: "Internet+",database, login, online, web based.

I. INTRODUCTION

Alumni Management System has been designed using Java and MySQL in order to make it a user interactive application. This is an online platform for students to take advantage of the benefits. The alumni network is becoming important in the development of the institution because of their vast potential that benefits both the institution and the students. This project which stores Alumni data which makes easier to maintain the records of the alumni. The proposed system will be can be accessed by alumni anywhere. Alumni of a college generally stay connected with their immediate friends but find it hard to stay connected with college mates. Alumni management work is directly related to the amplification effect of alumni resources in "Internet+" era

II. METHODOLOGY

1. Following are the basic modules involve in project-Admin, Event Manager, Alumni.
2. Connect students from different corners of world on a single platform.
3. Help institute to broadcast the event information to their alumni's.

Go beyond boundaries & help students network faster

Fig:-1

III. RESULTS AND DISCUSSION

The front portion contains resgistration tab along with login tab through which all the user cn use the system

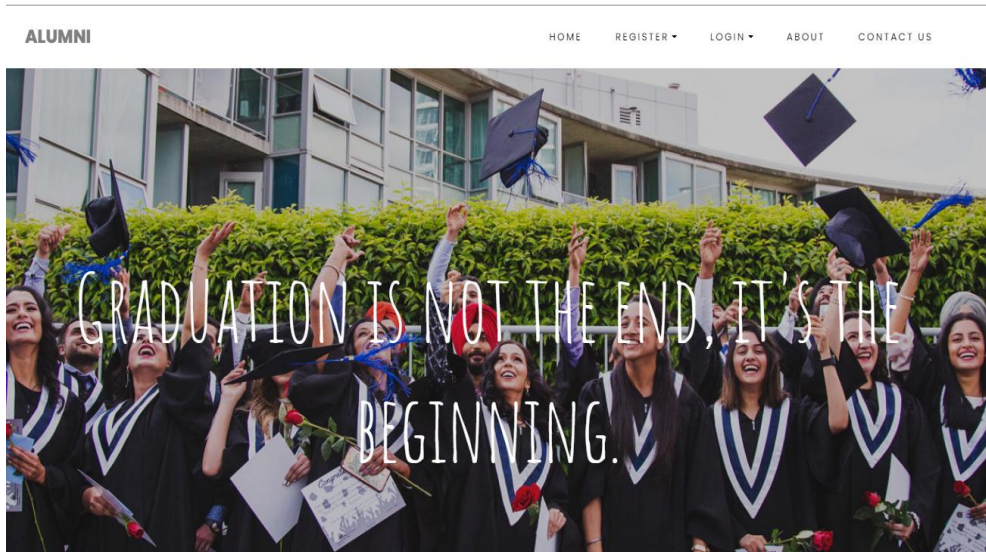

Fig-2

Admin:

This module helps them to register user. The contents are id, name, Address, contact no, mail id, password. They can update, delete, maintain the data. In this module admin can update the details of the student like student name, password, address, contact number, mail id, register number, department name. These details stored in database.

- Update student details.
- Search user details.
- View student details.
- Event update information.

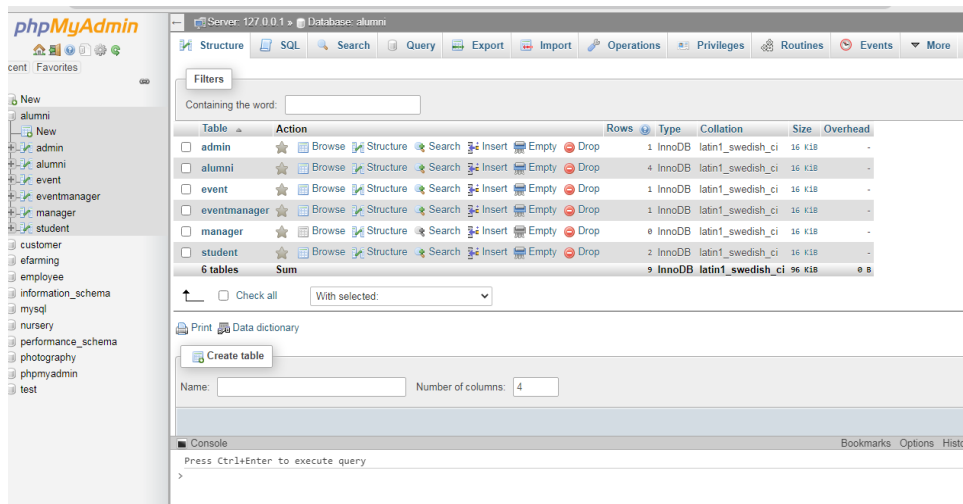

Fig-3

Event Manager:

This Module help to upload event information. It also help to notify alumni about instutional activites

- Update Events.
- Upload Events

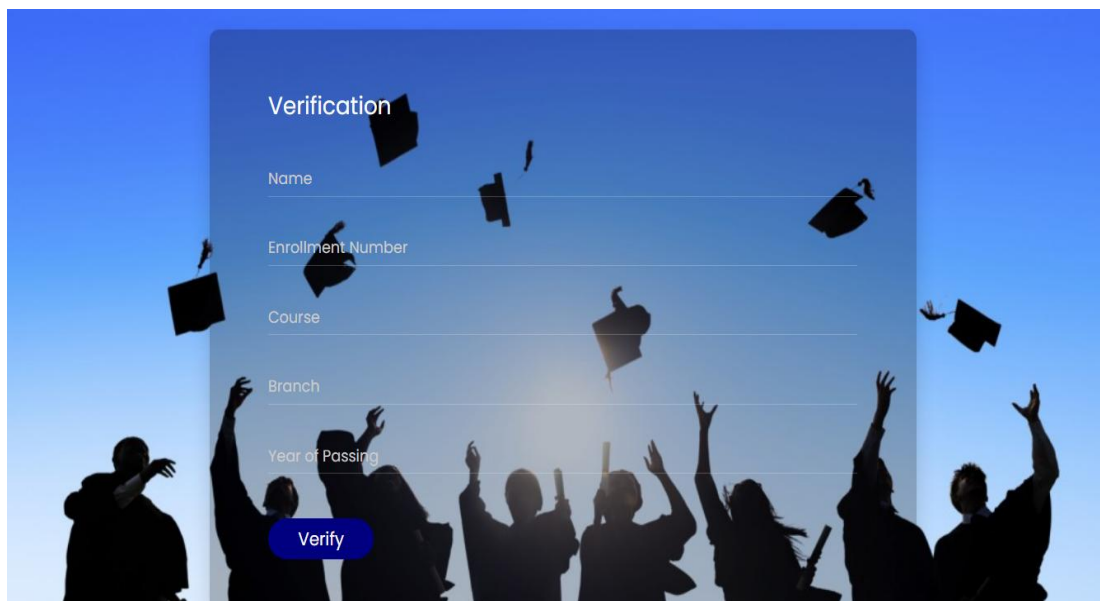

Fig-4

Alumni: This Module helps to register alumni and use the services provided on the platform. In this sub module we can search the details of the college information and the user can select college information as their wish.

- Update user details.
- Search friend details.
- View student details

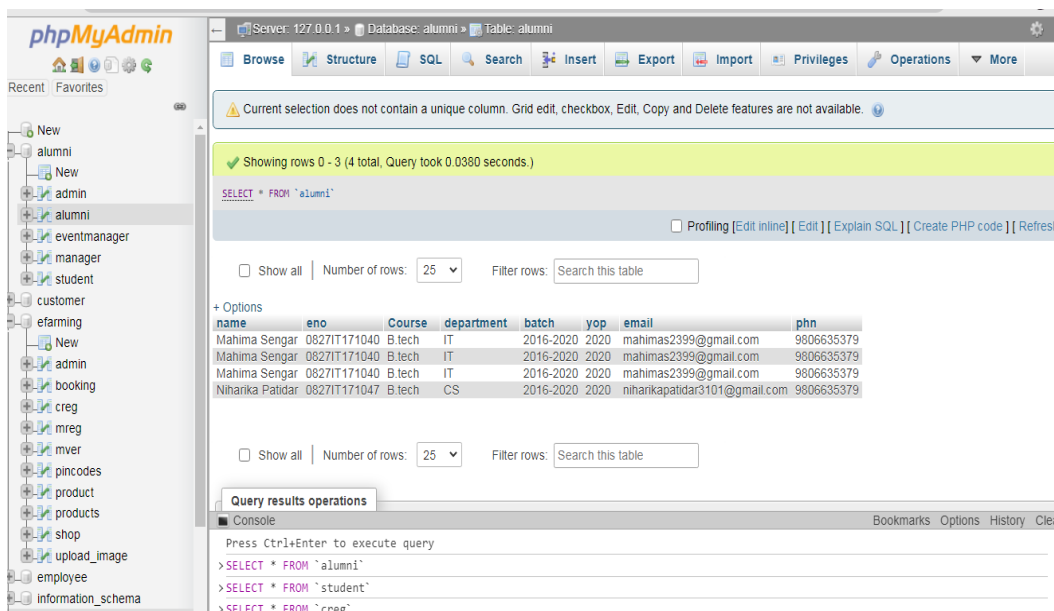

Fig-5

IV. PROPOSED SYSTEM

The Proposed system is a computerized system, maintained at centralized databases i.e. in automated forms. Maintaining all the records online makes it simpler to access and retrieve data. If they want any record they can easily search it. It provides multiple user accessibility and also has different user . So the system is accessible for all the employees of the organization.

- It is very easy to manage historical data in database.
- It is very easy to record the information of the colleges and about the students in the databases.This system is secured.

- This system provides a single point of network as they connect all the people connected to the university at a single place allowing interactions, exchange of ideas and other information.
- The system is an application for managing and accessing Alumni information regular.

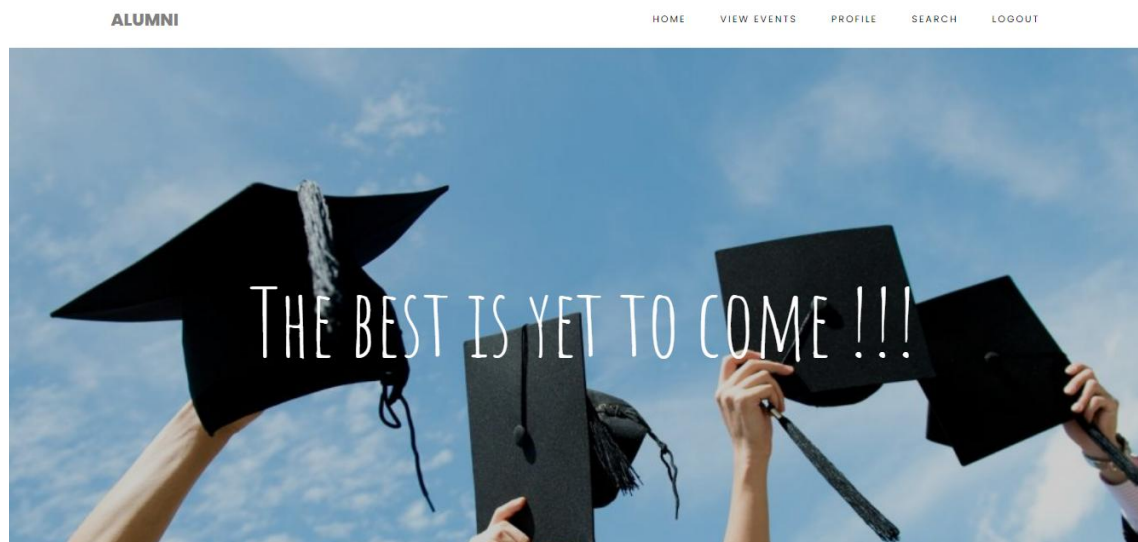

Fig.-6

V. CONCLUSION

The system is beneficial for alumni and institute. A easy way to reduce manual work and time saving. This System helps to maintain the connectivity of alumni with institution. The system is secured and has been developed keeping in mind al pros and cons. This module should be used for collecting data and connect with college students and faculty.

FUTURE SCOPE

In future would try to expand this project for faculty member who had been a part of institute once as faculty alumni. On the other part project will be implemented on a bigger platform such as university. This model is restricted to initial level where vast data can't be managed easily.

ACKNOWLEDGEMENTS

We owe a debt of sincere gratitude, and respect to our guide and mentor Prof. Praveen Bhanodia and Prof. Ketki Tiwari of AITR, Indore for his sagacious guidance, vigilant supervision and valuable critical appreciation throughout this project work. We express profound gratitude and heartfelt thanks to Dr Kamal Kumar Sethi, HOD IT, AITR Indore for his support, suggestion and inspiration for carrying out this project. We thank for support and guidance received from Dr S C Sharma, Director, AITR, Indore whenever needed.
