ABSTRACT

In many institutions academic attendance is very important, so that's why we want to develop a proctor calling software that help's teachers to watch and understand the overall attendance of all students. The Proctor calling system is web based application(web page) that helps education institution to keep track on attendance system efficiently. It eliminates all paper work of teacher, then Proctors will call absent students, after they record it calling as informed successfully or not. And students who's has attendance is tor calling application which help to reduce the extra cook load of proctor's. These application call's the absent student with communication the proctor and their parents will feel safe parents with the calling information. Also send to messages & emails. To students less then 80% that student goes to defaulter list automatically. With the help of proctor calling software result of colleges is increased and also towards their children's .It stores real-time data, and it provides awareness to the ladies parents, it is less consuming process and it also helps colleges to understand average attendance of student each day.

I. INTRODUCTION

Proctor calling system is students by the mentors. The proc who are absents. This application provides the defaulter list. Long years ago, student's goes to their teacher's for the purpose of education & students are and gain the knowledge & also they live with their teacher's These all done in ancient time.

But, in recent year's many modern colleges & Schools are developed We have done a college information in college. These application Proctor calling which also automatically calling. Messaging to the absent have done college Survey different metro cities & small villages also we have noticed something in that college survey international universities colleges are not providing proctor calling system, proctor means teacher Or mentor who have watch on student in class room. Ok, so that's why, the student. Attendance system is get decreased - day by day, and also the result of College. In many institutions academic attendance is very important, so that's why we want to devolve a proctor calling application that help's teachers to watch & under star the overall attendance of all student's. The proctor calling is a web application technology that to improve the processes of proctor calling and recording The student attendance which is daily and monthly with presenting their default list. This system uses proctor calls. Email messages for every student. This Paper proposes a system is based on a student's regarding to Calling or information their Attendance which is displayed. Performed with their mentor. The proctors will need to work on this attendance.

This system offers several advantage Attendance student, firstly, it eliminates present record of students, then record every student's attendance the need for manual which including present students & absent students Then, Proctors. Will call to the absent students, after they record it calling is informed successfully or not if informed then who received application for maintain student at it (in parent Then, recording the list who's present is below than 80%. Also it present the defaulter list of student. So, this is very time consuming procedure. So, the proctor calling is stay investing son of to solution this all challenges. By using proctor calling application technology it will solve the challenge's or questions or work more easily and performed very effectively.

II. LITERATURE SURVEY

A software which calling or information about absentee student record and maintaining the attendance and increasing the colleges result record of students is described in paper. Every college. Teachers / Lecturer take present of students with the help of their class subjective class which used this record mentor for working on our application. In these app only mentors access to the system with their respective login ID's & or proctors have passwords. In this application that is developed for teachers or the college departments proctor's to

access for monitoring the attendance of the student. This will be access only login teachers to obtain the record of students. For these students roll no and their parent's contact numbers ate must be filled with their mentor or admin. The contact number was must be working currently which check on these number we filled number which on your adhar Card Number.

Presents a Procter calling system is realization including establishment & maintained of the database of frontend web development & describes the system functional architecture design & emphasizes the system's functionality, database design & functional modules, etc. Fully functional flexible & convenient web & friendly interface provide a geed guarantee for student info in Procter Calling.

III. PROBLEM STATEMENT

Problems are arises when teacher is taking the attendance and by mistake teacher note down as a particular student is absent then problem will be generated. And when student give wrong mobile number about their parents or themselves also then problem will be generated.

IV. DESIGN

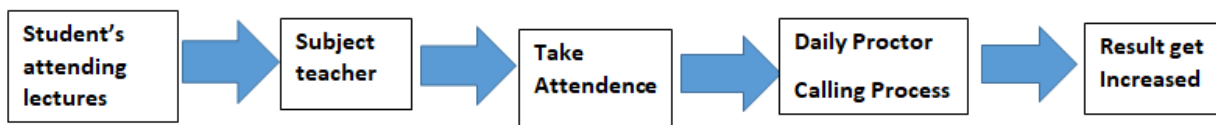

Fig 1. Proctor Calling Process.

Student's attending lectures:- We can check all the student's are attending daily lecture's as per the timetable.

Subject teacher:- In everyday, teacher came on classroom and take the attendance after the end of session.

Take Attendance:- Each day teacher can take daily attendance as per their lectures .

Daily Proctor calling Process:- who are the student's will attending the daily lectures OR who students are not attending the lectures after attendance then proctor will call that student.

Result get increased:- Using proctor calling software absent students parents will know the overall attendance of their child and automatically result of college is get increased.

V. CONCLUSION

Proctor calling application is used to developed smart attendance proctor calling system. Individual Proctors needs to maintain or filled record of students in firstly with including the student's. Contact number for calling absent students with to parents to take the information their recording. This product development used the adaption from the prototype model. This prototype model has five phases. It is namely planning, analysis, design, prototype development & testing. This model is suitable for the development of this product because it can give the real picture about the product of the operational of the product.
