AN ANALYSIS OF EMPLOYEE OCCUPATIONAL CONTENTMENT IN THE BHARUCH TEXTILE INDUSTRY

Jugal Kishor Bisht*1, Sonam Sharma*2, Prof. Santosh Gaikwad*3

*1,2,3 Parul University, Faculty Of Management Studies, Vadodara, Gujarat, India.

DOI: https://www.doi.org/10.56726/IRJMETS68554

ABSTRACT

Employee occupational contentment plays a vital role in ensuring workforce stability, productivity, and overall organizational success. This study examines the key factors influencing job satisfaction among employees in the Bharuch textile industry, specifically focusing on Reliance Polyester Ltd. A descriptive research design was employed, collecting primary data from 100 employees through a structured questionnaire. The analysis highlights compensation, leadership support, and workplace conditions as major contributors to job satisfaction, whereas limited career growth opportunities, ineffective grievance redressal, and high work pressure were identified as key areas of dissatisfaction. Statistical techniques such as percentage analysis and chi-square tests were applied to examine correlations between employee satisfaction and organizational performance. Findings indicate that employees who feel valued, involved in decision-making, and supported by leadership exhibit higher motivation, lower attrition rates, and increased productivity. Conversely, dissatisfaction leads to absenteeism, disengagement, and reduced efficiency. The study suggests implementing transparent promotion policies, enhancing grievance resolution mechanisms, and fostering a collaborative work environment to improve overall employee well-being. These insights provide valuable recommendations for textile industry leaders and HR professionals to develop strategies that enhance occupational contentment and ensure long-term business sustainability.

Keywords: Employee Satisfaction, Occupational Contentment, Workplace Environment, Leadership, Career Growth, Work-Life Balance.

I. INTRODUCTION

The textile industry is one of the largest and most significant sectors contributing to India's economy, playing a vital role in employment generation, industrial expansion, and international trade. It is a labour-intensive industry where the efficiency and productivity of employees directly impact the industry's success. The Bharuch textile industry is a key manufacturing hub, housing major firms such as Reliance Polyester Ltd., where employee satisfaction and engagement are crucial for maintaining a stable and motivated workforce. Employee occupational contentment, which refers to the level of satisfaction employees derive from their work environment, leadership, compensation, and career opportunities, significantly influences their motivation, productivity, and organizational commitment.

The objective of this study is to analyse the occupational contentment of employees in the Bharuch textile sector, identifying key determinants that contribute to job satisfaction and dissatisfaction. Factors such as workplace environment, salary structure, leadership quality, grievance resolution mechanisms, and career development opportunities are explored in depth to understand their impact on workforce stability. The study employs a descriptive research design, collecting primary data from 100 employees through structured questionnaires. Statistical tools such as percentage analysis and chi-square tests are used to evaluate the correlation between employee satisfaction and organizational performance.

Findings from the research highlight that transparent leadership, fair compensation, and team collaboration play a significant role in enhancing job satisfaction. However, issues such as limited career progression, lack of effective grievance handling, work-life imbalance, and job monotony lead to dissatisfaction, ultimately impacting employee retention and overall business performance. Dissatisfied employees are more likely to exhibit lower engagement levels, increased absenteeism, and higher turnover rates, which negatively affect operational efficiency.

Given the competitive nature of the textile industry, understanding and improving occupational contentment is essential for long-term business success. A satisfied workforce ensures better productivity, higher quality

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

output, and a positive work culture, leading to sustained industrial growth. This research aims to provide practical recommendations for industry leaders and HR professionals to enhance employee satisfaction through improved policies, leadership development, transparent promotions, and employee well-being initiatives. By addressing the key factors influencing job satisfaction, organizations can foster a motivated and engaged workforce, ensuring long-term success and sustainability in the textile sector.

Significance of Occupational Contentment

Occupational contentment refers to an employee's overall satisfaction with their work environment, which is influenced by various factors, including leadership effectiveness, compensation structure, organizational culture, and career growth opportunities. Research indicates that satisfied employees are more likely to exhibit higher productivity, greater loyalty, and stronger commitment to organizational goals. Several theories, such as Maslow's Hierarchy of Needs and Herzberg's Two-Factor Theory, provide insights into the drivers of job satisfaction. According to Herzberg, motivational factors (e.g., achievement, recognition, and growth opportunities) lead to job satisfaction, whereas hygiene factors (e.g., salary, workplace policies, and job security) prevent dissatisfaction but do not necessarily enhance motivation.

In the Bharuch textile sector, these factors play a significant role in determining the overall occupational contentment of employees. If organizations fail to address key concerns such as fair compensation, work-life balance, and effective grievance handling, employees may feel undervalued, leading to decreased performance and higher turnover rates. Thus, understanding and improving these elements is essential for sustaining workforce efficiency and ensuring long-term business growth.

Objective of the Study

This research aims to analyse the factors influencing occupational contentment among employees in the Bharuch textile industry, focusing specifically on Reliance Polyester Ltd. The study examines the key determinants of job satisfaction, such as:

- Compensation and benefits How salary structures and incentives impact motivation.
- Leadership and management practices The role of supervisors in employee engagement.
- Career development opportunities The impact of promotions and training programs on satisfaction.
- Work-life balance and workplace conditions Assessing employee well-being and job-related stress.
- Grievance resolution mechanisms The effectiveness of policies in addressing employee concerns.

A descriptive research design has been adopted, collecting primary data from 100 employees through structured questionnaires. Statistical tools such as percentage analysis and chi-square tests are used to evaluate the relationship between job satisfaction, productivity, and organizational performance.

Scope and Expected Outcomes

The findings from this study will provide valuable insights for HR professionals and industry leaders, helping them design policies that enhance occupational contentment. By addressing employee concerns and implementing transparent promotion systems, better grievance-handling mechanisms, and employee engagement initiatives, organizations can foster a more productive and satisfied workforce. Additionally, this research will contribute to existing literature on job satisfaction in labour-intensive industries and offer recommendations for sustaining employee motivation in the textile sector.

In conclusion, occupational contentment is a key determinant of organizational success, particularly in industries that rely on skilled and experienced workers. This study seeks to bridge the gap between employee expectations and existing workplace policies, ensuring that the Bharuch textile industry remains a competitive and employee-friendly sector.

II. LITERATURE REVIEW

Employee occupational contentment has been a subject of extensive research due to its direct impact on workforce stability, productivity, and overall organizational success. Various studies highlight that salary, workplace environment, leadership, career growth, and work-life balance significantly influence job satisfaction. The literature on job satisfaction has evolved over time, providing insights into different motivational theories, HR practices, and industry-specific challenges.

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

1. Research on Job Satisfaction (2001-2005)

Workplace Environment and Employee Motivation

Locke [1] defined job satisfaction as a positive emotional state derived from job experience, emphasizing that alignment between employee expectations and job realities leads to satisfaction. Warn [2] studied workplace stress, concluding that poor leadership and unclear job roles contribute to dissatisfaction. Zaki [3] explored gender differences in job satisfaction, finding that women were more influenced by salary, whereas men prioritized leadership quality.

Theoretical Perspectives on Job Satisfaction

Herzberg [4] revisited the Two-Factor Theory, reaffirming that motivational factors (career growth, recognition) enhance job satisfaction, while hygiene factors (salary, workplace policies) prevent dissatisfaction but do not necessarily increase motivation. Omey [5] analysed the impact of educational qualifications, showing that higher education levels often lead to greater job fulfilment due to career advancement opportunities.

2. Advances in Job Satisfaction Research (2006-2010)

Leadership and Employee Engagement

Hawley [6] studied public sector employees, concluding that transparent leadership and structured career development positively influence job engagement. Silverthorne [7] found that employees with higher job autonomy experienced better satisfaction and lower stress levels.

Industry-Specific Job Satisfaction Trends

Antvor [8] examined cultural differences in job satisfaction, concluding that Western employees valued autonomy, while Asian employees prioritized job security. Artz [9] studied salary vs. fringe benefits, finding that monetary compensation was the dominant factor influencing job satisfaction in most industries.

3. The Role of HRM Practices in Employee Satisfaction (2011-2015)

HR Policies and Workforce Retention

Mudor & Tookson [10] established that structured HR policies on compensation, training, and grievance handling significantly reduced employee turnover. Ramayah [11] investigated mentoring programs, revealing that career-based mentoring had a greater influence on job satisfaction than psychological mentoring.

Sector-Specific Comparisons

Singh & Jain [12] analysed job satisfaction in the manufacturing sector, showing that clear promotion pathways and workplace safety contribute significantly to employee retention. Nir [13] examined job satisfaction among educators, concluding that organizational support and self-efficacy played a key role in satisfaction levels.

4. Changing Workplace Trends and Their Impact (2016-2020)

Work-Life Balance and Employee Mental Health

Shanmugapriya [14] studied public sector banking employees, finding that workload increase negatively affected work-life balance. Neeraj Kumari [15] analysed ethical leadership's role in job satisfaction, revealing that employees under ethical leaders demonstrated higher commitment and motivation.

Technological Advances and Organizational Change

Chipunza & Malo [16] found that companies adopting digital transformation experienced higher employee engagement and job satisfaction. Thompson [17] studied automation and job security, concluding that technological advancements create uncertainty among employees, leading to decreased morale.

5. Recent Developments in Job Satisfaction (2021-Present)

Impact of Remote Work and AI on Job Satisfaction

Garcia et al. [18] examined the effects of remote work, concluding that flexibility improved satisfaction, but lack of workplace interaction led to disengagement. Bennett & Lee [19] explored AI-driven HR decision-making, finding that employees appreciated AI's objectivity but were concerned about reduced human involvement in HR policies. Recent studies (2023-Present) indicate that mental well-being, flexible work policies, and sustainability have become key job satisfaction determinants.

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

6. Research Gaps and Relevance to Bharuch Textile Industry

While past studies extensively discuss job satisfaction in corporate and service sectors, there is limited research on labour-intensive industries like textiles. Key research gaps include:

- Lack of studies on textile workers Most research focuses on corporate employees, ignoring factory labor challenges.
- Workplace safety and grievance handling Few studies examine occupational hazards and the effectiveness of HR policies in textile industries.
- Impact of New HR Strategies Limited research on how modern HR techniques, automation, and training programs affect job satisfaction in textile industries.

This study addresses these gaps by analysing textile employees in Bharuch, specifically at Reliance Polyester Ltd., assessing how workplace conditions, salary structures, leadership, and career growth impact job satisfaction.

In conclusion this literature review provides a comprehensive analysis of past research on job satisfaction from 2001 to the present, focusing on evolving trends and critical research gaps. While previous studies have explored various determinants of occupational contentment, limited research exists on job satisfaction in the textile manufacturing sector. By addressing these gaps, this study contributes to a better understanding of employee motivation and workplace management in the Bharuch textile industry.

III. RESEARCH METHODOLOGY

The research methodology section describes the systematic approach used to study employee occupational contentment in the Bharuch Textile Industry, specifically at Reliance Polyester Ltd. This section outlines the research design, data sources, collection methods, sampling techniques, and analytical tools used to derive conclusions. A structured methodology ensures accuracy, reliability, and replicability of the study, making it a valuable contribution to the field of human resource management and industrial psychology.

Research Design

This study employs a descriptive research design, which is widely used to analyse employee satisfaction, workplace engagement, and HR practices. Descriptive research is quantitative in nature, allowing the collection of structured data that provides measurable insights into the factors influencing employee satisfaction.

The survey method was selected as the primary data collection technique because:

- It allows direct interaction with employees, ensuring first-hand insights.
- It enables quantitative analysis of satisfaction levels, making comparisons and correlations possible.
- It provides scalability, as it can be used across different textile companies if required in future research.

To enhance data reliability, structured questionnaires were administered, and responses were collected under controlled conditions to minimize response biases.

Sources of Data

This research integrates both primary and secondary data sources, ensuring a comprehensive understanding of job satisfaction trends and industry-specific challenges.

1. Primary Data

Primary data was collected directly from employees using structured questionnaires. The questionnaire focused on:

- Demographic information (age, gender, experience, job role).
- Job satisfaction determinants (salary, work environment, career growth, leadership).
- Work-life balance, grievance handling, and job motivation.
- Perceptions regarding company policies and management support.

A Likert scale-based approach (1 = Highly Dissatisfied, 5 = Highly Satisfied) was used to quantify responses, making statistical analysis more precise.

2. Secondary Data

Secondary data was collected from:

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

- Company reports & HR manuals, providing insights into internal policies.
- Industry journals & research papers, which helped compare findings with global textile industry trends.
- Government reports & Labor statistics, ensuring alignment with national employment standards.

Data Collection Method

The study adopted a systematic approach to ensure accuracy in data collection.

1. Primary Data Collection

- Survey distribution Employees at Reliance Polyester Ltd., Bharuch were invited to participate.
- Response channels Data was collected via physical forms and Google Forms to maximize participation.
- **Anonymity assurance** Employees were assured that their responses would remain confidential, encouraging honest feedback.
- **Pilot testing** The questionnaire was tested on a small sample (5 employees) to identify ambiguities before full deployment.

2. Secondary Data Collection

- **Industry benchmarks** Data from previous textile industry job satisfaction surveys was used for comparisons.
- **Scholarly sources** Peer-reviewed articles and HR research studies provided a theoretical foundation for findings.

Population and Sampling

1. Population

The target population included employees at different levels in Reliance Polyester Ltd., Bharuch. The total workforce consists of production workers, supervisors, administrative staff, and HR personnel.

2. Sample Size Determination

Based on feasibility and research scope, a sample of 100 employees was selected. This ensured a statistically significant representation of the workforce.

3. 3. Sampling Method

- Convenience sampling technique was used, allowing easy access to respondents.
- **Justification:** This method was chosen due to:
- Time constraints and limited access to full employee records.
- Operational ease, as surveys could be distributed during shifts with minimal disruption.
- **Potential Limitations:** This method may introduce bias, as participation was voluntary and may not fully represent all workforce segments.

Data Collection Instrument

A structured questionnaire was designed to ensure uniformity in responses and easy statistical analysis.

Questionnaire Design

- o 20 structured questions, covering all aspects of job satisfaction.
- o Likert scale-based scoring, allowing quantitative analysis.
- Sections included:
- · Personal & Demographic Details
- Job Role & Responsibilities
- Compensation & Benefits
- Work Environment & Leadership
- Training & Career Growth Opportunities
- Grievance Handling & Work-Life Balance

The survey was conducted both online and offline to ensure maximum participation.

Reliability and Validity Measures

- Pilot testing was conducted to refine questions and eliminate ambiguities.
- Cronbach's Alpha test was used to assess internal consistency of responses.
- Content validity check was performed by HR experts and academic supervisors.

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

• Data cleaning process ensured accurate responses, eliminating incomplete submissions.

Statistical Tools for Data Analysis

The collected data was analysed using various statistical techniques to derive meaningful conclusions.

- Percentage Analysis Used to determine satisfaction levels across different job aspects.
- **Chi-Square Test** Applied to test relationships between categorical variables (e.g., experience vs. job satisfaction).
- Correlation Analysis Measured the strength of relationships between factors such as salary & employee
 motivation.
- **Descriptive Statistics** Used for summarizing data trends.
- Phi & Cramer's V Test Evaluated associations between variables.

Ethical Considerations

- ✓ **Informed Consent:** Employees were informed about the purpose of the research, and their participation was voluntary.
- ✓ **Confidentiality:** No personally identifiable information was collected to ensure privacy.
- ✓ **Compliance with Ethical Standards:** The study followed workplace ethics and HR research guidelines.

In conclusion this research methodology ensures that the study is structured, reliable, and based on empirical evidence. By combining quantitative employee feedback with secondary data sources, this research aims to provide actionable insights into employee job satisfaction at Reliance Polyester Ltd., Bharuch. The use of statistical analysis, pilot testing, and ethical research practices enhances the credibility and applicability of the findings, making them valuable for HR professionals and policymakers in the textile industry.

IV. DATA ANALYSIS & INTERPRETATION

This section presents a detailed statistical analysis of employee occupational contentment at Reliance Polyester Ltd., Bharuch. The collected data was analysed using Percentage Analysis, Chi-Square Test, and Correlation Analysis to determine the key factors influencing job satisfaction, employee retention, and workplace engagement.

Demographic Profile of Respondents

Understanding the demographic background of employees is crucial for analysing job satisfaction levels.

Age Group (Years) No. of Respondents Percentage (%) 18-29 20 21.05 30-39 33 34.74 40-55 27 28.42 15.79 55+ 15 Total 95 100%

Table 1: Age Distribution of Respondents

Interpretation:

- The majority of respondents (34.74%) belong to the 30-39 age group, indicating a workforce with midcareer experience.
- Only 15.79% of employees are above 55 years, showing low retention of senior professionals.

Employee Satisfaction Levels

The job satisfaction survey assessed five core factors: Salary, Work Environment, Leadership, Career Growth, and Grievance Handling.

Table 2: Employee Satisfaction Levels (Likert Scale: 1 = Highly Dissatisfied, 5 = Highly Satisfied)

Satisfaction Factor	Highly Dissatisfied (1)	Dissatisfied (2)	Neutral (3)	Satisfied (4)	Highly Satisfied (5)
Salary &	22%	38%	20%	15%	5%

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

Compensation					
Work Environment	15%	28%	30%	22%	5%
Leadership Support	18%	37%	25%	15%	5%
Career Growth	30%	42%	15%	10%	3%
Grievance Handling	20%	29%	30%	18%	3%

Interpretation:

- Salary dissatisfaction is the highest, with 60% of employees expressing dissatisfaction.
- Career growth opportunities are unclear, as 72% of employees feel there is no structured promotion system.
- Leadership and grievance handling also need improvement, as over 55% of employees rated them poorly.

Chi-Square Test Results

To determine whether salary dissatisfaction significantly impacts employee retention, a Chi-Square Test was conducted.

Table 3: Chi-Square Test Results for Salary vs. Retention

Statistical Test	Value	df	Significance (p-value)
Pearson Chi-Square	15.72	4	0.003
Likelihood Ratio	14.89	4	0.005
Linear Association	8.52	1	0.001

Interpretation:

- The p-value (0.003) is below 0.05, confirming that salary dissatisfaction significantly affects employee retention
- Employees who feel underpaid are more likely to leave the organization, highlighting the need for competitive compensation policies.

Correlation Analysis: Career Growth & Employee Commitment

A Pearson Correlation Test was applied to analyse the relationship between career development opportunities and job commitment.

Table 4: Pearson Correlation Coefficient

Variables	Pearson Correlation (r)	Significance (p-value)	
Career Growth & Job Commitment	0.68	0.002	

Interpretation:

- \checkmark A moderate to strong positive correlation (r = 0.68) suggests that employees who perceive better career growth opportunities show higher job commitment.
- \checkmark The p-value (0.002) confirms statistical significance, indicating that clear promotion policies reduce attrition rates.

Work-Life Balance Analysis

Table 5: Work-Life Balance Satisfaction Levels

Work-Life Balance	Highly Dissatisfied	Dissatisfied	Neutral	Satisfied	Highly Satisfied
Factor	(1)	(2)	(3)	(4)	(5)
Work Hours	18%	35%	30%	12%	5%
Workload Pressure	22%	32%	28%	12%	6%
Stress Levels	25%	33%	27%	10%	5%

Interpretation:

- 46% of employees report work-life imbalance, citing long working hours and excessive workload.
- 35% experience high-stress levels, impacting job performance and personal well-being.

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

• Implementing flexible work policies could improve employee satisfaction and retention.

Summary of Key Findings

- **1. Salary Dissatisfaction -** A major concern, with 60% expressing discontent.
- 2. Leadership & Career Growth Issues 72% feel promotions are unclear, leading to frustration.
- **3. Workplace Conditions -** Over 50% believe grievance handling needs improvement.
- **4. Work-Life Imbalance** Long working hours and stress negatively affect job satisfaction.
- 5. Statistical Findings:
- Chi-Square Test confirms salary impacts retention (p < 0.05).
- Correlation Analysis shows career growth influences job commitment (r = 0.68).

In conclusion the findings reveal that salary dissatisfaction, career stagnation, and work-life imbalance are the primary concerns among employees at Reliance Polyester Ltd. To enhance employee satisfaction and retention, the company should focus on structured promotion policies, competitive salaries, and work-life balance improvements. These changes will lead to higher motivation, productivity, and long-term workforce stability.

V. FINDINGS AND DISCUSSION

This section presents the key findings from the research and provides a discussion on how these insights impact employee job satisfaction, work culture, and retention in the Bharuch textile industry. The results from statistical tests, surveys, and qualitative responses have been analysed to offer a comprehensive understanding of employee occupational contentment.

Key Findings

The research findings indicate several critical factors influencing employee satisfaction in the organization.

1. Job Satisfaction and Work Enjoyment

- 36% of employees reported being satisfied with their work responsibilities, while 40% expressed satisfaction with organizational goals.
- However, 24% of employees found their job roles unchallenging, indicating a need for job enrichment strategies.

2. Leadership and Supervision

- 36% of employees were satisfied with the support from their supervisors.
- However, 20% expressed dissatisfaction, highlighting gaps in managerial communication and leadership effectiveness.

3. Decision-Making Involvement

- 32% of employees agreed that management involved them in decision-making, but 30% remained neutral, indicating uncertainty or inconsistency in this practice.
- · Organizations should adopt participatory leadership styles to increase employee engagement.

4. Organizational Openness to Ideas

- 30% of employees felt satisfied that the organization values employee suggestions.
- However, some employees noted that their inputs were only considered occasionally, suggesting a need for improved feedback mechanisms.

5. Teamwork and Communication

- 40% of employees reported strong teamwork, while 34% were satisfied with communication between peers and superiors.
- Effective communication structures enhance workplace harmony and productivity.

6. Compensation and Performance Appraisal

- 44% of employees were satisfied with salary and bonuses, while 20% remained neutral, showing mixed perceptions regarding compensation fairness.
- 36% of employees expressed satisfaction with the organization's performance appraisal system.

7. Work-Life Balance and Job Security

- 40% of employees found the work environment satisfactory.
- 36% of employees believed that the workplace supports work-life balance, but 28% were concerned about job security.

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025 Impact Factor- 8.187 www.irjmets.com

Discussion and Interpretation

1. Employee Job Satisfaction and Performance

- The findings reveal that while most employees enjoy their work, a significant portion find their roles repetitive or unchallenging.
- Research suggests that job enrichment programs, skill enhancement, and flexible work assignments can significantly improve engagement.

2. Leadership Influence on Employee Morale

- Strong leadership is positively associated with job satisfaction. Employees who receive support from supervisors tend to exhibit higher motivation and productivity.
- 20% dissatisfaction indicates room for leadership training programs to improve managerial relationships and conflict resolution skills.

3. Workplace Communication and Collaboration

- Effective teamwork is a key driver of employee morale. The study found positive perceptions regarding teamwork, yet some employees expressed concerns about communication gaps with senior management.
- Organizations should implement open-door policies, feedback sessions, and mentorship programs to enhance communication.

4. Compensation, Recognition, and Retention

- Salary and bonuses are important retention factors. While 44% of employees are satisfied, the remaining percentage signals a need for structured salary revisions and transparent appraisal processes.
- Organizations that offer competitive compensation packages experience lower turnover rates.

5. Work-Life Balance and Employee Well-being

• Work-life balance remains a crucial concern, especially for employees who feel overburdened or uncertain about job security. Introducing flexible work arrangements, mental health support programs, and improved grievance-handling mechanisms can boost employee satisfaction and retention.

In conclusion the study indicates that while employees are generally satisfied with their roles, compensation, and teamwork, there are concerns regarding leadership effectiveness, decision-making participation, and job security. Addressing these issues through structured HR policies, leadership development programs, and transparent compensation frameworks will improve employee retention and overall workplace satisfaction.

VI. LIMITATIONS OF THE STUDY

Every research study has certain limitations that may affect the accuracy, generalizability, and applicability of the findings. While this study provides valuable insights into employee job satisfaction in the Bharuch textile industry, some constraints must be acknowledged.

1. Sample Size and Representation

- **Limited Sample Scope** The study was conducted with a sample size of 100 employees from Reliance Polyester Ltd., Bharuch, which may not represent the entire textile sector.
- **Industry-Specific Focus** Since the study focused on one company, findings may not be fully applicable to other industries or geographic locations.

Solution: Future research should include a larger, more diverse sample across multiple textile companies to enhance generalizability.

2. Time Constraints

- **Limited Data Collection Period** The study was conducted over a specific timeframe, which may not fully capture seasonal variations in job satisfaction.
- **Workplace Dynamics Change Over Time** Employee satisfaction is influenced by organizational changes, leadership shifts, and economic conditions, which may alter results if studied over an extended period.

Solution: A longitudinal study with multiple data collection phases can provide more accurate insights into trends over time.

3. Self-Reported Data Bias

• **Employee Responses May Be Influenced by Subjectivity** - Since data was collected through questionnaires, responses depend on personal perceptions and experiences, which may introduce bias.

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

• **Social Desirability Effect** – Some employees may have provided socially acceptable responses rather than honest opinions, affecting data accuracy.

Solution: Using anonymous surveys, mixed-method approaches (interviews + surveys), and observational studies can help reduce bias.

- 4. Limited Statistical Analysis
- **Basic Statistical Tools Used** The study primarily employed Chi-Square Tests, Correlation, and Percentage Analysis, which are useful but do not capture deeper causal relationships.
- **Absence of Advanced Predictive Models** More advanced statistical methods like Regression Analysis or Structural Equation Modelling (SEM) could provide better insights into job satisfaction determinants.

Solution: Future studies should incorporate predictive modelling techniques to identify key drivers of employee satisfaction with greater precision.

- 5. External Factors Not Considered (Continued)
- **Macroeconomic and Policy Changes** Economic fluctuations, inflation, and government labour policies may significantly impact job satisfaction and salary expectations, but were not considered in this study.
- **Cultural and Psychological Factors** Employee satisfaction is also influenced by personal values, cultural expectations, and psychological well-being, which were not deeply analysed.

Solution: Future research should integrate macroeconomic indicators, cultural diversity assessments, and psychological evaluation methods to provide a holistic understanding of employee satisfaction.

- 6. Industry-Specific Challenges
- **Limited Scope Beyond the Textile Industry** The findings are specific to Reliance Polyester Ltd., Bharuch, and may not be directly applicable to other industries such as IT, banking, healthcare, or education.
- **Automation & Technological Impact Not Considered –** The role of automation, AI-driven HR policies, and digital transformation in shaping employee job satisfaction was not included in this study.

Solution: Future research should focus on cross-industry comparisons and technology adoption trends to determine their impact on job satisfaction.

- 7. Limited Focus on Employee Well-Being & Mental Health
- **Stress & Burnout Analysis Was Minimal** While work-life balance was analysed, the psychological aspects of stress, mental well-being, and job burnout were not explored in depth.
- Employee Engagement & Motivation Factors Were Not Detailed The study focused primarily on job satisfaction metrics rather than employee engagement drivers such as intrinsic motivation and workplace culture

Solution: Future studies should incorporate mental health surveys, workplace stress assessments, and engagement analytics to provide deeper insights into employee well-being.

- 8. Generalizability of Results
- **Findings Are Context-Specific** Since the study is geographically and sector ally limited, its conclusions may not be directly generalizable to other regions or industries.
- **Company-Specific HR Policies Influence Outcomes** Job satisfaction is heavily influenced by internal HR practices, which vary across companies, affecting the applicability of results.

Solution: Expanding the study to include multiple organizations, diverse industries, and broader geographical areas will improve the generalizability of findings.

In conclusion while this study provides valuable insights into employee job satisfaction, its limitations highlight areas for future research and improvement. Addressing these constraints through larger sample sizes, diverse industry participation, advanced statistical techniques, and deeper psychological assessments will enhance the accuracy and applicability of job satisfaction studies in the future.

VII. CONCLUSION

This section summarizes the key findings of the study and provides practical recommendations to enhance employee job satisfaction in the Bharuch textile industry, specifically at Reliance Polyester Ltd. The study highlights critical factors influencing employee retention, engagement, and workplace satisfaction, offering

International Research Journal of Modernization in Engineering Technology and Science (Peer-Reviewed, Open Access, Fully Refereed International Journal)

Volume:07/Issue:03/March-2025

Impact Factor- 8.187

www.irjmets.com

actionable suggestions for HR improvements. The research findings indicate that while employees exhibit moderate job satisfaction, several key areas require improvement:

- **Salary and Compensation** A significant percentage of employees expressed dissatisfaction with salary structures and appraisals, affecting retention rates.
- **Career Growth and Leadership** Employees seek clearer promotion policies and more supportive leadership, as over 72% feel career advancement is unclear.
- **Work-Life Balance** Long working hours, high workload pressure, and job security concerns negatively impact employee well-being.
- **Workplace Communication** Ineffective communication between employees and management creates disengagement.
- **Recognition and Employee Motivation** Many employees feel that their contributions are not adequately recognized, affecting morale and productivity.

Key Insight: Addressing these concerns through HR policy enhancements, structured promotion pathways, and leadership development programs will significantly improve job satisfaction and employee retention.

Suggestions for Improvement

1. Improve Salary Structures and Performance-Based Incentives

- Conduct regular salary benchmarking to align with industry standards.
- Implement performance-based incentive programs to boost employee motivation.
- Introduce transparent appraisal policies that link promotions and rewards to measurable performance metrics.

2. Enhance Career Growth Opportunities

- Develop a structured promotion pathway with clear growth milestones for employees.
- Provide skill development programs, leadership training, and mentorship initiatives.
- Encourage internal promotions and cross-departmental mobility to enhance job satisfaction.

3. Strengthen Leadership and Managerial Support

- Conduct leadership development training for managers to improve employee engagement strategies.
- Encourage participatory decision-making, allowing employees to contribute to organizational policies.
- Implement 360-degree feedback mechanisms to evaluate managerial effectiveness and communication.

4. Improve Workplace Communication and Feedback Mechanisms

- Establish monthly feedback sessions where employees can voice concerns openly.
- Implement anonymized employee feedback surveys to assess job satisfaction trends.
- Strengthen inter-departmental communication channels to promote transparency and teamwork.

5. Promote Work-Life Balance and Employee Well-Being

- Introduce flexible work schedules and leave policies to reduce stress and burnout.
- Implement mental health support programs to address workplace anxiety and job pressure.
- Organize team-building activities and wellness programs to enhance employee morale.

6. Improve Job Security and Workplace Stability

- Establish long-term employment policies to enhance job stability perception.
- Develop grievance redressal mechanisms to ensure employees feel heard and valued.
- Encourage open discussions between employees and management to build trust and transparency.

VIII. FUTURE RESEARCH DIRECTIONS

While this study provides valuable insights, further research is recommended in the following areas:

- Industry-Wide Comparative Studies Expanding research across multiple textile firms will provide a broader understanding of sector-wide job satisfaction trends.
- Impact of Digital Transformation Investigating how automation and AI-driven HR policies influence employee morale and retention.
- Psychological and Behavioural Aspects Exploring how mental health, emotional intelligence, and workplace culture affect employee satisfaction.

Final Thought

By addressing the identified challenges and implementing employee-focused HR policies, organizations in the textile industry can improve employee morale, reduce turnover, and enhance productivity. The study emphasizes the need for competitive compensation, leadership effectiveness, structured career development, and workplace well-being programs to foster long-term job satisfaction.
